Highlights in this release

Manager Role: minor adjustments (KERNEL-988)

The customisable [Manager](#) role had a couple of built-in limitations that were preventing some use cases. It is now possible for Manager user to assign jobs freely to *other* Manager user, including themselves. They also have access to *both* edit forms under **People** and **Projects** unless specifically limited to the "simple" forms.

Subtitler: Shortcut manager - Change of default setup (NUTXTWEB-413)

We have changed the default shortcut setup for new users based on user input and the most common requests. (If you want to change to this setup but already have shortcuts defined, click "Reset" in the shortcuts panel. Please note that this action cannot be undone, however.)

Bug fix: Ampersand in Subtitler text export (PTF-518)

When using the new option to export a plain text file from Plint Subtitler, "&" was rendered as "&";, Now fixed.
