Highlights in this release

Preferred pronouns (KERNEL-987)

Users can now specify their preferred pronoun when editing their information under "Profile & Settings". For starters, the selected pronoun is displayed by their name to workbench/admin users, but expect this setting to be used elsewhere going forward.

Recalculate job fees with Resource matrix after Confirm/Accept (KERNEL-946)

When jobs fees are calculated using a [Resource matrix](#), it is automatically converted into a static/custom fee when jobs are accepted or self-assigned. Recalculating multiple jobs after this point has so far been a chore, for example if the running time of a job or the matrix itself is updated and the changes need to be reflected in an ongoing project. A new feature under the "Batch edit" menu on the joblist makes this far easier.
