Highlights in this release

Possible for project managers to see whether a subtitling job has been started (KERNEL-985)

Statuses showing which jobs are Done (or not) are sometimes not enough to get an impression on how work is progressing. An additional flag has now been added, called "Subtitling started". What it actually checks for is whether, for a specific job, Plint Subtitler has been opened and a Save event has been triggered. This status can be used to include/exclude jobs under [Projects / Find jobs](#) and [joblist filters](#), and it can also be included with job data when creating a [Project report](#).

Save job list filter not working (PTF-548)

Storing joblist filter had ceased working. Now it works again!
