Highlights in this release

Support for Skill sets (formerly Language pairs) (KERNEL-1349)

We introduce a major change in how user skills can be handled in the form of Skill sets. In short, they let you specify which languages and job types a user can work in, in the form of combinations. This allows for better precision, where a user may for instance be approved for Subtitling into two languages but QC in only one.

SkillSets

Source	Target	Job types	Status	
English*	Swedish*	Subtitle creation	approved	
+ Add skill set				

Whether to use the old matching logic or this one is determined on Project level using the new setting "Assignment logic". This will affect how assignment criteria are applied in both Job tank, automatic assignment, reassignable jobs and the "Assigned to" dropdown, visible when editing a single job.

Add project info to notifications about MT and ASR jobs (KERNEL-1309)

The notification emails sent to project managers on completion of ASR and MT jobs now include information about project and target language.

Revision #4
