KNP Improvements

- Optimize import of KNP-lists, as in *very big lists* can now be imported
- Handle line breaks in Core to identify KNPs in source data
- Bug fix: If the KNP contains short terms, there will be a lot of false positives within words.

Allow JSON extension when importing into Plint Subtitler

Until now, .txt was the only allowed extension when importing Plint JSON files. Now, .json files are just as welcome, as long as they are correctly formatted.

Revision #3
