Highlights in this release

Support for Additional subtitle in Project node

The Additional subtitle feature, which loads a VTT file into the Plint Subtitler monitor, now supports being linked to the project node. In other words; if you do not link it to a part, it will show up in *all* parts – same logic as with media.

Pagination on Client order page

An unfiltered Orders page can be very slow to load and in worst case scenario even time out. Pagination has now been added to solve that problem before it occurs.

Revision #1
