Highlights in this release

Additional export formats: Text and CSV (KERNEL-857)

Joining the previous [output formats](#) are two welcome additions to what you can export from Files tab, within Plint Subtitler or with [Auto-create subtitles](#). These formats are also included on the [Download subtitles](#) page

- Text file
 - This file only contains the text (with or without HTML formatting) and the subtitle ID. Perfect for offline spellchecking and reference, among other things
- CSV
 - This format includes all the data in the JSON files (including annotations, comments and optional data such as Text ID and flags), in a format which can be more easy to use in other systems.
 - It also includes in-time and out-time in both SMPTE format and with milliseconds.

Additional options in Project report/export (KERNEL-938)

When [exporting job data under Projects / Report](#), you can now include the following variables

- Shark tank (yes/no)
- Status
- Invoiced
- Price calculation
- PRID (Payment reference ID)
- Editor: MQM mode
- Editor: Load template
- Editor: Limit editing

Report tool - Punctuation - Spacing (NUTXTWEB-34)

When running the Report tool in Plint Subtitler, you can now check for the correct use of spacing after punctuation.

Reset job as a Resource with stored milestone (NUTXTWEB-368)

Resetting a job, for example to load an updated template, is no longer the sole province of a project manager. Anybody with a job can do this in Plint Subtitler, and the nice thing is that a

backup of the current file as automatically stored. This backup is called a "Snapshot" and can be found under "Track changes" along with Milestones and Backups.

Full list of features and fixes

- KERNEL-857
- KERNEL-903
- KERNEL-938
- KERNEL-966 /PTF-499
- NUTXTWEB-282
- NUTXTWEB-343
- NUTXTWEB-368
- NUTXTWEB-380 / PTF-475
- KERNEL-961/PTF-495
- KERNEL-963/PTF-497
