Highlights in this release

Filters on dashboard (KERNEL-863)

The new options and filters on the Dashboard make it easier to organize and focus on the right tasks, especially if you have lots of them. You can, for example, show jobs in a certain target language or job type, or filter out the jobs that are "Awaiting corrections". You're welcome!

Backlink when sent to Dashboard on inactivity (KERNEL-974)

Some pages and forms time out on inactivity, sending you to the Dashboard. This minor but welcome change makes it easy to return to the page or job when you return from that interesting water cooler chat.

Project report: only show limited preview (KERNEL-997)

With the possibility to add job data to project reports it became much easier to create *really big reports*. If these were too big, just showing the report *preview* on the page could become too much for the browser to handle. Now, only the first 1,000 rows of the report are shown in the preview. To get the rest, you have to *export* them.

Example of a report setting likely to yield a really big report.

Plint Subtitler: Functionality for 50,59.94,60 fps (NUTXTWEB-288)

Framerates of 50, 60 and such have until now presented problems for Plint Subtitler, forcing a pre-conversion. Now native support has been added.

Full list of features and fixes

- KERNEL-1006
- KERNEL-863 / VIA-001
- KERNEL-974
- KERNEL-976 / VIA-014
- KERNEL-997
- NUTXTWEB-288
- NUTXTWEB-385

- NUTXTWEB-386
- NUTXTWEB-410
- KERNEL-1002 / PTF-512
- KERNEL-1008 / RELATED PTF-517
