Highlights in this release

Text-friendly mode in Plint Subtitler (NUTXTWEB-455)

This one is pretty cool: a new button in Plint Subtitler switches the editor into a mode much more suitable for handling longer texts where line length and a maximum of two lines are not really an issue, such as audio transcripts, audio descriptions, narration scripts and so on. In this mode, the text field is a bit bigger, the font size is somewhat decreased and word wrap is implemented, making it much easier to work with longer segments of text. (This mode is ideally combined with a suitable Report tool preset.)

Text-friendly mode activated in editor, auto line-breaks has therefor been temporarily disabled

And so with the sunshine and the great bursts of leaves growing on the trees, just as things grow in fast movies, I had that familiar conviction that life was beginning over again with the summer.

Kaj tiel kun la sunbrilo kaj la grandaj folioj kreskantaj sur la arboj, same kiel aferoj kreskas en rapidaj filmoj, mi havis tiun konatan konvinkon, ke la vivo rekomencas kun la somero.

Bug fix: Invisible project Notes and Messages (KERNEL-1225)

A performance-related refactor temporarily hid Notes and Messages and project level from project managers and other users. Now fixed.

Bug fix: MP4 files with uppercase extension are not processed (KERNEL-1164)

One of the silliest and most annoying bugs in Plint history is now solved: uploaded media files with the mp4 extension in uppercase ("MP4") were not properly processed for Plint Subtitler. Now fixed.

Revision #3
