Highlights in this release

The first deploy after the summer code freeze contained a number of minor bug fixes and improvements.

Custom email to owners of selected jobs from joblist (KERNEL-1179)

Ever wanted to contact, or batch edit, a lot of users on the same project? This new addition to the "Emails" menu on the joblist pages collects the users on all *visible* jobs and shows them under People. This gives you control of exactly which users to include and all the tools on the People page, including "Email users". Very useful!

Job assignment project – Job list 12 Jobs

Filter + Reset filters Show user priority Show job fees Load filter ? Batch edit Joblist template Emails

Job assignment project
In process ID: 69 N/A Jobs: 12 PM: Workbench user Acme Inc.

100%

Status	ID	Title	Assigned to	Delivery date	Confirmation	
In process	689	Template creation (Auto assigned)	Example LSP Inc		Preliminary	
In process	692	Subtitling from template (Job tank)	Example Vendor AB		Confirmed	

Send confirmation emails
Announce Job tank jobs
List/email visible users

GraphQL additions:

- Include price rows in project result (KERNEL-1271)
- Support for adding deliveryAt with createProject (KERNEL-1272)

Bug fix: Uppercase text reloaded as lowercase with Load Translations (NUTXTWEB-454)

Using the Load Translations feature in Plint Subtitler, text that was in all uppercase would be reloaded as all lowercase. Now fixed.

Warnings about deadlines for Preliminary (invisible) jobs on user Dashboard (KERNEL-1291)

There were some mysterious warnings about approaching or missed deadlines for invisible jobs. This happened with jobs set to *Confirmation status: Preliminary* and such jobs should not be

notified to the user. Now fixed.

Bug fix: Can not access Job Archive (KERNEL-1261)

Users with a *lot* of jobs in their archive would sometimes find that this page timed out. Pagination has solved this problem.

Bug fix: Batch edit for Editing mode has stopped working (NUTXTWEB-444)

It wasn't possible to change the Editing mode in Plint Subtitler with batch editing. Now it's possible.

Bug fix: Calibrate timecode with negative value is not saved (NUTXTWEB-450)

Revision #7
