Support for Project category and Project type under Project / Batch edit

More fields under Project batch edit!

Delete and reparent

A very welcome addition when batch editing joblists: you can now, in most cases, maintain the sequence of jobs when deleting jobs in the middle of a workflow. The logic is simple: the *parent* of each deleted job inherits their respective child jobs.

Before

Batch deleting Spot QC jobs with the Reparent option on

Batch edit on Delete and reparent

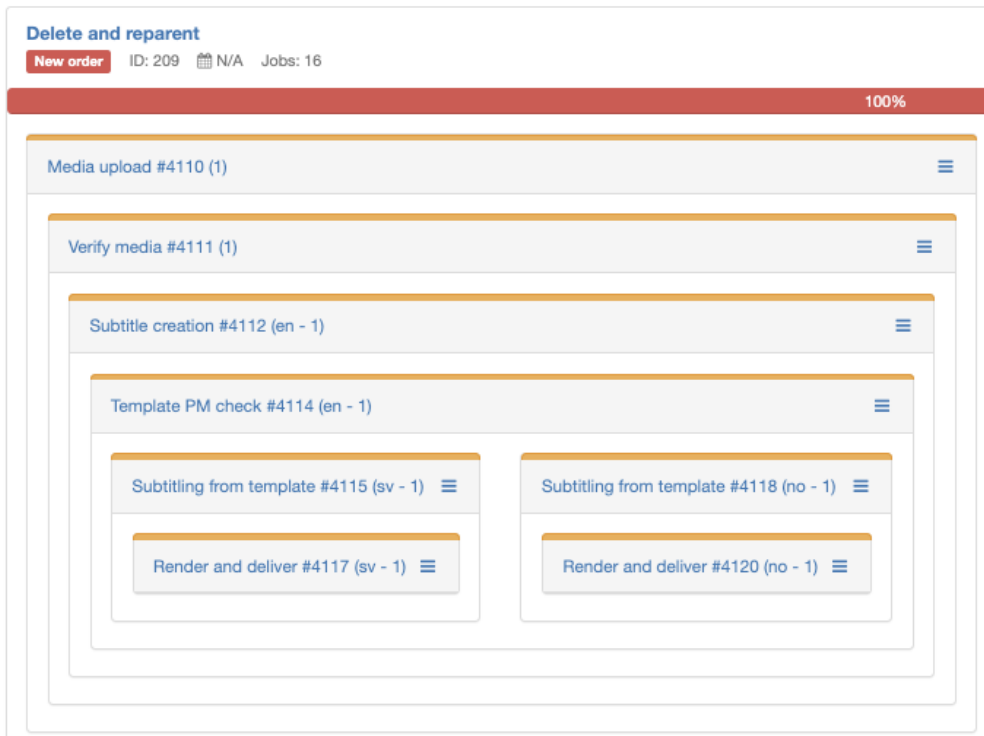

Filter jobs

Part number	Language	Job type
<input type="text"/>	<input type="text"/>	Spot QC x
Confirmation status	Status	Delivery method
<input type="text"/>	<input type="text"/>	<input type="text"/>
Label	Parent job ID	Assigned to
<input type="text"/>	<input type="text"/>	<input type="text"/>
Comment contains	Delivery date contains (e.g. "2015-05")	Job Tank
<input type="text"/>	<input type="text"/>	-- N/A --
Subtitling started		
<input type="text"/>		

Delete Jobs

- Delete Jobs
- Reparent
- Force Delete Jobs

After: Spot QC jobs are gone but the sequence of jobs is intact
