Add new event and conditions to webhooks

When specifying webhooks under Tools & Data, you can now work with much greater precision. Hooks can be dispatched with the following criteria:

- Project has a specific Client company
- Project has a specific tag
- Job has a specific job type
- Job has a specific tag

This allows for tailor-made webhooks, for example when a certain client with a platform of their own is to be kept in the loop regarding specific jobs/steps on their projects.

There are also two new **events**: *Assignee updated* and *Confirmation status changed*.

Revision #1
