Highlights in this release

Additional job tank options

In order to create a more level playing field you can now adjust the rate at which users of a certain priority level can pick up jobs from the job tank. This will work regardless of how jobs are grabbed, manually or by some form of automation.

Job tank settings

Configure the rules for grabbing jobs from the Job tank. Please note that these rules only apply to Resource users without the 'Vendor' setting.

Level	Number of jobs	Direct job access	Grab rate limit	
1	80	Yes	5 jobs per 5 minutes	
2	25	Yes	5 jobs per 5 minutes	
3	10	Yes	5 jobs per 5 minutes	
4	0	Yes	5 jobs per 5 minutes	
5	0	Yes	1 jobs per 5 minutes	

Add non-drop attribute in TTML script

One of those "a tiny thing that makes a big difference" things. When auto-creating/exporting TTML files from Plint Core, there is now always dropframe information included in the header. This information is based on the project setting.

Revision #1
