

2026-06-30

Highlights in this release

Additional language code fields

The imaginatively titled "Alt code 1" and "Alt code 2" fields now available when editing languages under Tools & Data provide additional means of mapping languages between systems. They are also available over GraphQL when fetching job/project data.

Client Overview in Plint Core

Clients logging into Plint Core can now access a view summarising the overall progress on the orders matching the current filter, providing an at-a-glance view of how things are going.
