

Automated jobs and job parenting

Understanding the following concept is essential when using automated jobs:

For all automated jobs except "Auto upload", the action is triggered when the **parent job changes status**. Status change needs to be done *through* the parent job, for example by clicking "Report as done" on a Report job or through the "Change status" dialogue in the online editor.

Simply editing or batch editing the properties of a job and setting status to "Done" will *not* trigger automatic jobs.

Typical examples:

- Media verification in Plint Subtitler, followed by "ASR"
- Final QC in Plint Subtitler, followed by "Auto subtitle creation"
 - and perhaps "Auto delivery"
