

This is Plint

Plint Core is a full-featured and highly configurable system for cloud-based media localization. Powerful tools for workflow orchestration let you define and assign all the steps needed to complete a project. But Plint also provides built-in tools to actually do the work, from normal file uploads to online editing or automated tasks.

Put another way, it makes work ... work.

- For project managers it is a powerful tool for creating and maintaining workflows, and keeping tabs on project progress.
- For freelancers, Plint is an easy-to-use portal for accepting, discussing and completing jobs.
- From a client perspective, Plint provides a bird's eye view of project progress as well as easy access to deliverables.

Plint revolves around:

- People
- Projects
- Jobs
- Files

Managing projects efficiently

Creating and maintaining workflows often takes time and resources that could be spent on delivering quality work. For recurring assignments, Plint uses highly configurable templates to generate interconnected workflows based on project data. Suitable resources – in-house or external – are automatically selected based on customisable criteria. Automatic notifications and built-in logic makes sure that jobs are done in the right order, but no time is wasted between them. Changes in mid-project can quickly be incorporated and all the necessary jobs automatically added for an additional language or episode. At the same time, details on job level can always be adjusted at any point in the project.

Communication tools

Plint's comes with built-in tools for communicating with both internal and external parties about projects or individual tasks. System messages can be linked directly to projects or jobs to provide a clear context. Other tools include project Forums, a built-in Support area and a Help section whose articles can be targeted to selected users. This allows you to keep as much of the interaction in one system as you like, greatly reducing reliance on e-mail.

File-based or online workflows

While the online editing tools are among Plint's flagship features, some projects still revolve around delivering and receiving files. Plint can be used to streamline workflows that rely entirely on file delivery, online work, or a combination of both.

"The Dashboard": Plint's home page for all user types. In this case a freelancer with some job offers plus an already accepted job, which is not yet ready for work.
