

# Plint Subtiter: DubQC (Additional Audio Track)

When you start a DubQC job with an additional audio track, the dubbed audio track plays by default when the video begins.

Under the video monitor, you'll find a **green megaphone button**. This button allows you to toggle between the dubbed audio and the original audio track.

If you hover over the button, you'll see which track you can switch to. When the megaphone icon is **highlighted in green**, the dubbed audio is active. When the icon is **black without a highlight**, the original audio is active.
